

Gain Distinctive Vision To Prioritize Cyber Risk

The TrustElements Platform:

- Contextualizes risk in qualitative, quantitative and easy-to-understand business terms for Executives
- Provides drilled down technical details in each risk category for in depth investigation
- Enables secure team collaboration and enterprise-level data protection powered by Microsoft Azure
- Enforces Third-party Risk Management relying on intelligence-driven decisions
- Communicates the security progress in a form of graphs and charts

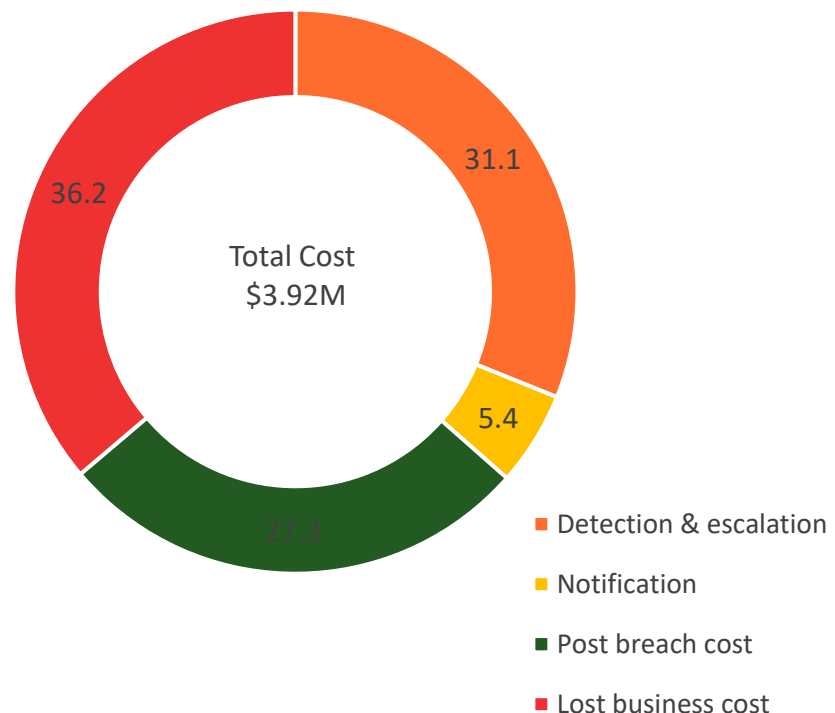

Breaches are inevitable; however, you can sufficiently decrease chances and costs of being compromised publicly by taking a proactive approach to your cyber security strategy and risk management.

TrustElements is a business intelligence platform that uses open-source intelligence and non-intrusive scans to invest your resources and time into the right direction.

By investing 10% of budget into security you can receive 600% ROSI (Return on Security Investment) and save your brand and customer turnover. Organizations that do not deploy security automation realize a total cost of breach \$5.16 million – for a net total cost difference of \$2.51 million.

Data breach total cost broken down into four cost categories
